TEPATO SYSTEMS, INC

DATA & TECHNOLOGY SOLUTIONS FOR SMALL BUSINESS

September 2006

Tepato Systems offers software consulting services to help you, the small business owner. If you want the power to make better business decisions, software and other technology tools should be key parts of your strategy.

Website Out of Date?
Don't waste your money on a stale website

Your company's website should always be kept current so that it can accurately reflect your business and perform as a valuable marketing tool for you. If it's been more than 6 months since the content on your site has changed, you may be wasting the money you spend on hosting.

Things change frequently in the business world - your site needs to keep up or it will be useless:

- *Have you added new staff or products recently?*
- *Is your site mostly text?*
- *Does your site include your company logo?*
- *How does your site compare to the sites of your competitors?*

If your site looks bad, then your company looks bad to all who see it.

Tepato Systems can update your site to help you to take advantage of your investment in it. We can do anything from a simple content change to a total redesign, and we can do it within your budget.

- **To see all of the sites we've created or redesigned, see our website**

Product Spotlight - Battery Backup Products
What will happen to your computer if the lights go out?

Power outages are a fact of life. Power surges can occur just before or after an outage, but they can also happen at random. You need to protect your home, your appliances, and especially your electronics, including your computer.

There are a variety of surge protectors available at any electronics store - you probably think of them as "power strips". Most of them will do a reasonably good job protecting things like TVs, stereos, etc. from the power fluctuations that can happen at any time.

To fully protect your computer, you need a surge protector which also has a battery

backup built into it. The battery will give you time to shut down your system manually, but it often has software included which can automatically shut down all of your software for you. This is a great feature which will protect your computer even if you are not home at the time of the outage. You don't want to lose all of your valuable files because a raccoon got caught in a nearby transformer (it can happen)!

This type of product is called a UPS - Uninterruptible Power Supply. Check out the links below to see some examples. As with most electronics, they come with a variety of features and prices. Make sure that the one you choose gives you enough time to shut down all of your components before the battery runs out.

- **Cyber Power UPS (at Staples)**
- **Belkin UPS (at Staples)**
