TEPATO SYSTEMS, INC
DATA & TECHNOLOGY SOLUTIONS FOR SMALL BUSINESS

July 2009

Tepato Systems offers software consulting services to help small business owners and non-profit groups.

If you want to make better business decisions, software and other technology tools should be key parts of your business strategy.

Free Tool Quickly Renames Files

Updating filenames in Windows is time-consuming

Sometimes it can be a struggle to give all of your computer files meaningful names. They're easier to find that way, but if you're importing files like photos or songs in a group, it's not easy to do. Windows does not make it easy to change a large number of filenames, either.

The Rename Master tool is a free download that gives you the ability to rename a bunch of files at once. This utility will add, remove or replace parts of the filename. It can also use the file's properties, such as MP3 tags, to create meaningful names. You can even save a "script" to reuse it later, if you frequently do the same type of renaming operation (like renaming a group of photos you've just downloaded from your camera).

Want to Use More than 1 Monitor on Your Computer?

Free tool that increases ease of use with your multiple monitors

If you're an advanced computer user, or do a lot of graphics work, you may work with more than one monitor attached to your computer. Sometimes it's awkward to use them in the way that would work best for your needs, making it a frustrating experience.

This tool can give you familiar features like hotkeys and wallpaper, but it enables them on all of your monitors. It can also let you do things like moving windows from one monitor to the other more easily. You can upgrade to the Pro version for just $20 to get even more features (such as adding taskbars to each monitor).
